Komatsu equipment serial number guide list printable chart

Loading... Loading... Generally, VNTs use movable vanes in the turbine housing to adjust the air-flow to the turbine to realise comparable exhaust gas velocity and back pressure throughout the engine's rev range. Injection and combustion The Euro 4 and Euro 5 EE20 diesel engines had a Denso common-rail injection system with eight-hole, solenoid-type injectors that achieved an injection pressure of 180 MPa. For the Euro 6 EE20 engine, however, injection pressure was increased to 200 MPa. For the EE20 engine, the injectors were positioned at an almost 90 degree angle to the cylinder and were 40-50 mm shorter than those used in inline four-cylinder diesel engines. The Euro 5 and Euro 6 EE20 engines are understood to have ceramic-type glow plugs. The type and amount of precious metals in the oxidation catalyser and DPF catalyst were also revised; The number of idlers used in the auxiliary belt system was reduced; A more precise sensor measured battery current, voltage and temperature; and, The rear flange and bracket material, exhaust pipe and end plate material were changed for rust prevention. Furthermore, the intake ports and the diameter of the intake valves were designed to create a swirling effect for the air as it entered the combustion chamber. Euro 6 changes The Euro 6 emissions compliant EE20 diesel engine was introduced in the Subaru BS Outback in 2014 and the Subaru S.J.II Forester in 2015. Alternator The alternator for the EE20 diesel engine had a voltage charging control system which, to reduce the alternator's load on the engine, reduced the charging voltage when the vehicle was idling or being driven at a constant speed and increased voltage at low speeds. At higher engine speeds, however, the vanes would open to reduce airflow resistance and improve fuel consumption. Cylinder head The EE20 engine had an aluminium alloy cylinder head that was 17 mm thinner than the EJ20 engine. The four valves per cylinder (two intake and two exhaust) were actuated by pivot-type roller rocker arms. To enhance torque at engine speeds below 1800 rpm, the nozzle vanes would close to narrow the air path and increase the speed of the air flow. Crankshaft, connecting rods and pistons To withstand the high combustion pressures of a diesel engine, the crankshaft for the EE20 engine was subjected to a surface treatment for increased strength. It is understood that the maximum turbine speed for the IHI turbochargers used in the EE20 engine is 190,000 rpm. The EE20 engine had double overhead camshafts (DOHC) per cylinder bank that were driven by a chain and gear with a speed-reducing gear. Furthermore, the crankshaft journals were made from aluminium and cast iron due to the high pressure applied on both side of the cylinder block. The forged connecting rods had fracture split bearings for the crank end and an asymmetrical profile which increased precision during assembly. IHI turbocharger The EE20 engines have IHI turbochargers with variable nozzle turbines (VNTs). Initially, the turbocharger was positioned under the engine. EGR and DPF The EE20 diesel engine had a water-cooled exhaust gas recirculation (EGR) system which recirculated exhaust gases to the intake to lower combustion temperatures and reduce NOx emissions. The Euro 5 and Euro 6 EE20 engines had a closed-loop diesel particulate filter (DPF); both the oxidation catalyst and DPF were positioned next to the turbocharger to utilise the heat of the exhaust air. We export PCBN insert to world wide countries, such as USA united states, Germany, UK united kingdom, Italy, France, Turkey, Russia, Saudi Arabia, United Arab Emirates, Ukraine, Israel, Canada, South Africa, South Korea, Japan, Australia, New Zealand, Finland, Sweden, Norway, Danmark, Switzerland, Poland, Czech, Ireland, Holand, Belgium, Greece, Croatia, Spain, Portugal, Egypt, India, Philippines, Cambodia, Thailand, Malaysia, Singapore, Indonesia, Mexico, Brazil, Colombia, Chile, Argentina etc. The pistons had internal cooling channels, while oil jets in the crankcase sprayed the underside of the pistons. Relative to the Euro 5 version, changes for the Euro 6 EE20 engine included: An open deck cylinder block; An increase in piston crown capacity; A new piston skirt coating was introduced to reduce friction; A reduction in the compression ratio to 15.2:1 to lower combustion temperature and reduce NOx emissions; A fourth generation common rail injection system was introduced for higher injection pressure (200 MPa, previously 180 MPa) and a finer fuel spray; Each diesel injector had an integrated driver unit to reduce fuel leak volume, fuel pump load and improve fuel economy; A low-friction timing chain was introduced to drive the fuel pump (previously gear-driven) for quieter operation; The glow plugs were revised to improve pre-heating temperature at start-up and increase after-glow time; Oil jets were added to the timing chain drive; A low-pressure EGR circuit was introduced to increase the EGR rate, while the high-pressure EGR circuit was 'optimised'; The turbocharger repositioned at the bottom right of the engine (previously under the engine) and improved vane control was achieved; The diesel particulate filter (DPF) substrate specifications were revised and regeneration performance enhanced. For the Euro 6 EE20 engine, it is understood that the turbocharger was relocated to the bottom right of the engine.
